## Biotop Swimming Pool

# *Perfect Symbiosis*

After 25 years of building natural pools, in 2008 Biotop Landschaftsgestaltung GmbH came up with an innovation that drew the attention of the whole sector: A natural swimming pool without a regeneration zone. Although the intention was to only build a prototype, a number of pools have already been built. And the owners of the Biotop Swimming Pool are raving about this new product, which is the perfect symbiosis of conventional pool and natural pool.

The Biotop Swimming Pool looks like a classic pool but is in fact a fully-fledged biological pool – the Biotop Swimming Pool requires absolutely no chlorine or other toxic chemicals and offers the ultimate in swimming enjoyment in crystal clear water. Instead of a regeneration zone with the plants and wildlife that are required by a natural pool, a biofilter and a specially developed phosphorous filter treat the water on a biological and physical basis ensuring that it always remains pure and clear.

The Biotop Swimming Pool is the intelligent combination for perfect water quality:

- The Curved Sieve Skimmer and the Submerged Pump House form the first water circulation cycle that only operates approximately four hours per day during the season.
- The biological filter and PhosTec Ultra filter are operated by a second pump in their own water cycle in the Submerged Pump House, which draws the water from the bio filter and pumps it into the Phos Tec Ultra.
- The pool robot runs independently and its operating time can be regulated as required.

All the components are concealed under the sun deck – thus there is no need for additional space to house the water treatment.

All Biotop Natural Pool partner companies offer this innovation from Biotop.

**Interview with Peter Petrich**  
**Inventor of the Biotop Swimming Pool**

*Mr. Petrich – What is the difference between your Biotop Swimming Pool and a natural pool or a conventional pool?*

Well, Biotop Natural Pools as well as Biotop Swimming Pools – as opposed to traditional pools – both require absolutely no chlorine or other toxic chemicals. While a natural pool has a planted regeneration zone to take over the filtering work, with the Biotop Swimming Pool an intelligent combination provides pure, crystal clear water.

*What can you tell us about the technology used?*

The Biotop Swimming Pool is a mature product based on tried-and-tested Biotop technology. The main elements used are the Curved Sieve Skimmer, a biological filter as well as the innovative PhosTec Filter, with which we remove the phosphorus responsible for excessive algae growth from the water, and an automatic pool robot. Combined intelligently they allow us to produce high-quality water that is environmentally friendly and even saves energy.

*What are your target groups for the Biotop Swimming Pool?*

It is the ideal solution for anyone who feels better in a conventional pool than in a natural pool with plants and water creatures, but still wants to swim in chemical-free, natural water.

**The Advantages of the Biotop Swimming Pool:**

- water is processed biologically without the use of chlorine
- crystal-clear pure water at all times
- no sediment on the pool walls
- only a small amount of space is required as all the technical equipment is concealed under the sun deck
- can be combined with other elements of the natural pool system (e. g. external regeneration zone)
