## *Biotop-Waterplant-Fertilizer*

The Biotop-Waterplant-Fertilizer is a special all-around fertilizer for water plants. It is water soluble and contains all important nutrients and micronutrients in balanced proportions for ideal nutrition of the water plants.

**Easy to use:** According to table below, dissolve the appropriate amount of fertilizer (use the enclosed measuring cup) in a watering can (dilution approximately 500 ml/10 liter). This solution can be spread evenly over the water surface with the watering can. If a water circulation is installed, the solution can be put in the skimmer and the fertilizer will be distributed automatically. From April to the end of July the fertilization should be re-applied every two weeks. Alternatively, a double dosage of fertilization can be applied monthly.

The fertilization does not affect the water quality with regard to swimming in the Natural Pool! Swimming is possible even directly after the fertilization.

Dosage table on the back of the container.

Filling quantity: 5 kg

Keep the fertilizer away from children and pets.

A product of Biotop, especially developed for "Swimming-Teich".™

### **Table of dosage for fortnightly fertilization**

Pond-Volume (qm)	Amount of fertilizer (ml)
<b>1</b>	<b>7</b>
<b>10</b>	<b>70</b>
20	140
30	210
40	280
<b>50</b>	<b>350</b>
60	420
70	490
80	560
90	630
<b>100</b>	<b>700</b>
110	770
120	840
130	910
140	980
<b>150</b>	<b>1050</b>
160	1120
170	1190
180	1260
190	1330
<b>200</b>	<b>1400</b>
